

NATIONAL ASSOCIATION FOR THE PREVENTION OF TUBERCULOSIS

REPORT OF COUNCIL 1938

THE CRUSADERS' EMBLEM AND ITS HISTORY

The use of the red cross with the double arms stretches back into Christian usage of the Middle Ages, when it was the emblem of the Second Crusade. It was employed by the celebrated Godefroy de Bouillion, who placed it on his standard at the capture of Jerusalem from the Infidel in 1099, and later had it incorporated in the arms of the House of Lorraine.

The use of this cross as an international emblem in the crusade against Tuberculosis dates from 1902, when it was recognised at the International Conference at Berlin.

Just as the great crusading movements of the Middle Ages unified Europe in the presence of a common enemy, this cross expresses the spirit of all countries of determined warfare upon Tuberculosis, the greatest plague that has ever devastated humanity.

The representation of the emblem on the cover of this report is that now adopted throughout the world.

 HERTFORDSHIRE

OBJECT, MEMBERSHIP, AND METHODS OF THE ASSOCIATION

1. OBJECT.—The prevention of tuberculosis.
2. MEMBERSHIP.—The Association consists of Ordinary and of Life Members.
The contribution of Ordinary Members is 5s. annually. Those who subscribe annually a sum of not less than one guinea are enrolled as Subscribing Members. Life Members give a donation of five guineas.
3. METHODS.—
 - I. The education of public opinion and the stimulation of individual initiative by means of—
 - (a) A Central Office for the collection and distribution of information as to modes of diffusion of tuberculosis and measures of prevention.
 - (b) The circulation of pamphlets and leaflets setting forth in plain language the result of scientific investigations of the above points.
 - (c) Public lectures by men approved by the Council. Addresses at congresses and other public gatherings.
 - (d) Co-operation with other societies having for their object the promotion of public health.
 - (e) Co-operation with the Press.
 - (f) Periodical congresses and the issue of an annual report.
 - (g) The promotion of the establishment of open-air sanatoria for tuberculous patients.
 - II. The influencing of Parliament, County Councils, Health Authorities, Chambers of Agriculture, and other public and voluntary bodies on matters relating to the prevention of tuberculosis.
 - III. The establishment throughout the Country of local branches of the Association. Secretaries of branches are supplied with all literature at cost price.

COUNCIL'S REPORT

To the 40th Annual General Meeting of Members of the National Association for the Prevention of Tuberculosis, to be held in the College of Technology, Belfast, on June 29th, 1939, at 4.30 p.m.

I. THE FORTIETH ANNIVERSARY

Four decades have passed since our Association was formed. The amazing developments in general affairs during this period have not been absent from the tuberculosis field, and although many problems yet require to be solved, this generation can make a better contribution to the final overthrow of the disease than its predecessor in 1899, when the first General Meeting of the National Association was held.

The changes in tuberculosis work during these eventful years have indeed been striking. At the beginning of the century, fatalistic views until then largely held had not yet given place to a conception of the disease based on scientific knowledge. Although the *tubercle bacillus* had been discovered eighteen years before, the idea of hereditary transmission was still widely held. Treatment in the open air was comparatively new, and suspected by some as a harmful piece of "crankiness." The idea that tuberculosis caused much crippling and deformity was still rather novel. The State took no interest, and had passed no laws to prevent the disease. Though transmission of the germ by milk was recognised, public slaughterhouses where meat could be properly inspected were uncommon, and there was no supervision of cattle.

Though the first tuberculosis dispensary had been running in Edinburgh for thirteen years, there were as yet no dispensaries in England. The Brompton Hospital Sanatorium and the King Edward Seventh Sanatorium at Midhurst were yet to come. The local health authorities took little interest in the subject,

and it was not compulsory for doctors to notify tuberculosis cases except in a few towns.

The National Association was fortunate in its Royal patron, who, as Prince of Wales, called the memorable gathering at Marlborough House in 1898. The efforts of Sir William Broadbent, our first Chairman, were backed by His Royal Highness, and at the first meeting, held on May 2nd, 1889, the aims laid down were substantially those which the Association follows to-day.

And how different is the picture which presents itself now, forty years later. Tuberculosis is no longer thought of as a mysterious hereditary curse. Its pathology is more understood, and the methods of medical and social control have created legislation and inspired a devoted army of tuberculosis workers. A County Council neglecting its tuberculosis programme would soon be condemned by public opinion and called to account by the Minister of Health.

At the same time, those who know the misery and suffering which this disease causes to-day will feel no reason for complacency. They will be confident that only persistence in well-tried methods and the accumulation of fresh knowledge can render tuberculosis harmless. One object, "the establishment of open air sanatoria," no longer requires to be stressed in Britain, but there must be large parts of the Empire where no tuberculosis dispensaries exist, and sanatoria are unknown.

II. DEATH OF SIR ROBERT AND LADY PHILIP

Last year we had to record with great regret that Sir Robert, by his doctor's orders, was obliged to resign his place as Chairman of the Council. We must now refer to the sad event of his passing away in Edinburgh on January 26th, 1939, at the age of 81, leaving a sense almost of incredulity that such a legendary figure in the campaign against tuberculosis can be no more.

Sir Robert was a member of Council from the beginning, and hardly ever failed to attend its deliberations—travelling from Edinburgh for the purpose. In 1913 he became Vice-Chairman.

His services to the tuberculosis movement in this country and all over the world are widely known. His work for the Association, particularly on its educational side, and his interest in

H.R.H. THE DUKE OF KENT
President of the Association

fundamental principles, were memorable for over twenty years. At many an Annual Conference he was appreciated as the inspired Chairman who possessed the gift of guiding discussion into useful channels without fettering debate. In committee, his colleagues relied on his unfailing sagacity and resource, and his friends knew the philosophy with which he accepted the separation from his beloved work during the last year or so of illness.

Less than a month after this sad event, the Council were shocked to learn that Lady Philip too had passed away in Edinburgh with tragic suddenness.

Lady Philip, perhaps more widely known as Miss Edith McGaw, became interested in the subject long before the Great War and was responsible for organising in London a group of voluntary dispensaries, the first in England. The Paddington Dispensary was her own especial care and there is a melancholy interest in the fact that just before her death Lady Philip had arranged to lay the foundation stone of its new building.

This Association and tuberculosis work in general has cause to be grateful for her inspiration and intense energy, especially in connection with the Seal Sale and Publicity Committees.

III. ANNUAL CONFERENCE, 1938

Part of the Association's vitality is revealed in its annual gathering of members of local authorities, tuberculosis officers and others who meet yearly to discuss clinical and administrative problems. Under the Presidency of the Marchioness of Titchfield, the 24th Annual Conference of the Association was held between June 29th and July 2nd, 1938, in the Great Hall, Tavistock House, London.

The first day was devoted to the Annual Care Committee and Seal Sale meeting. An address was given by Lady Titchfield, and there followed two interesting discussions on the Employment of Ex-Patients and Boarding-Out Children from Tuberculosis Households.

Delegates at the main Sessions warmly received the Rt. Hon. Walter Elliot, Minister of Health, who said in the course of his remarks :

“ We owe an enormous debt—and I am glad to come here as Minister of Health and acknowledge it—to the pioneer efforts of the National Association

for the Prevention of Tuberculosis, and of course, to the great physician who was its Chairman for so many years, Sir Robert Philip."

Four subjects were chosen for debate :

1. The Development and Organisation of Anti-Tuberculosis Activities in Rural Areas.
2. The Family and Tuberculosis—Discovery and Protection of Contacts in a Tuberculous Household.
3. Control of Tuberculosis in Tropical and Sub-Tropical Regions.
4. The Mental Aspects of Tuberculosis.

At the conclusion of the Conference, Sir Percival Horton-Smith-Hartley occupied the chair for the 39th Annual General Meeting.

Two tours were organised for the last day of the Conference. The first consisted of an inspection of the Finsbury Dispensary, followed by a visit to Harefield Sanatorium, Middlesex. The second tour comprised an inspection of the Southwark Dispensary and a visit to the Burrow Hill Colony.

IV. ATTESTED HERDS

Reference was made in the last Annual Report to the Agriculture Act, 1937, and to the progress of the Scheme for Attested Herds. The encouragement given by the Ministry of Agriculture to the eradication of tuberculosis from herds is beginning to have substantial results, as will be apparent from the figures given in the table. They indicate we are now on the way to a time when tuberculosis in cattle will be a rare condition—with great benefit to public health.

At June 30th, 1938

			No. of Attested Herds	Cattle in Attested Herds
England and Wales	1,888	79,000
Scotland	792	61,000
Total, Great Britain				140,000

December 31st, 1938

England and Wales	3,529	134,439
Scotland	1,109	80,556
Total, Great Britain				214,995

V. INTERNATIONAL UNION AGAINST TUBERCULOSIS

The International Union will hold its Tenth Conference in Berlin in September of this year under the Presidency of Dr. Otto Walter, head of the *Reichs Tuberkulose Ausschuss*. It is the custom at these meetings to discuss three subjects, one of *Biological*, one of *Clinical* and a third of *Social* interest, and the Executive Committee has made a choice for this year's programme that will be widely commended.

1. The problem of the virulence of the tubercle bacillus.
2. The value of systematic examinations for the detection of tuberculosis in subjects over 15 years of age.
3. The rehabilitation of the tuberculous.

As delegates from Great Britain, Dr. Stanley Griffith will speak in the first, Dr. Frederick Heaf in the second, while Sir Pendrill Varrier Jones has been chosen *rapporteur* upon the third subject.

In times of international stress, it is particularly important that those engaged in the conflict against disease—a humanitarian effort which knows no frontiers—should understand one another, and the Council hope that many English doctors and laymen may find it possible to go to Berlin. Applications for joining the Conference should be sent through the Secretary-General at Tavistock House, who will also furnish information about membership of the International Union.

VI. HEALTH EDUCATION IN THE ISLE OF MAN

During the year new ground was broken in the Propaganda Department when Dr. Harley Williams gave a series of lectures in the Isle of Man, by invitation of the Local Government Board. The Governor, Vice-Admiral Leveson-Gower, and Lady Rose Leveson-Gower, gave their patronage to the tour, and attended the Douglas meeting personally.

Tuberculosis, both among human beings and dairy herds, is a serious problem for the people of the island. Prophets predicted, nevertheless, that no one would care to attend such lectures because of the universal dread of the subject. The good attendances both of school children and adults were therefore most gratifying.

VII. PUBLICITY

Since the appointment of Mr. W. A. J. Clarke as Press Officer on the staff of the Association, to which reference was made in the Report of Council for 1937, a self-contained Department has been established at Headquarters and contact has been maintained with some 900 newspapers throughout the country, embracing the national and provincial daily and evening papers and all important weekly journals.

Articles on the prevention and cure of tuberculosis, reports of meetings, and letters to the Editor regarding the annual Christmas Seal Sale are published with growing frequency. The Council wish to express their thanks to the Press for their co-operation.

At the twenty-fourth Annual Conference, extracts from the speeches of the Minister of Health and the Chairman of the Association were broadcast by the B.B.C.

Information from local organisations concerning their activities, and any request for advice on the best way to popularise local efforts, will be welcomed.

VIII. CYPRUS

The investigation in Cyprus conducted by Dr. Noel Bardswell reached an end in the autumn of 1938. The conclusions of the survey were indicated in the earlier report, published at the end of the first year, and a second document, which appeared as two special numbers of the journal *Tubercle*, was in the nature of a summary of further evidence supporting the original findings. Much credit is due to Dr. Bardswell and his careful collaborator, Nurse Jays.

Tuberculosis was found to be less common in the island than anticipated. A satisfactory Tuberculosis Scheme, as worked out by Dr. Bardswell, is in process of development, but the character and education of the people are important factors that will make progress towards complete eradication inevitably slow. Dr. Bardswell's final word summarises the encouraging nature of his investigation. "Granted the will and the capacity to take the necessary measures, Cyprus, more than most countries, can envisage the possibility of reducing tuberculosis to one of the lesser problems of Public Health Administration."

DR. NOEL BARDSWELL'S DEATH

The undoubted success of this mission was due to the experience, insight and perseverance of Dr. Bardswell himself, and it was the hope of the Council and himself that he would use his familiarity with tuberculosis in the Mediterranean to pursue investigations in fresh localities.

But alas, realisation of this long meditated plan which would have been of great value to our Colonial Administration was not permitted. Dr. Bardswell's health had suffered in the exhausting conditions of summer in Cyprus, and soon after his return he was taken seriously ill. He died in December, and a great career as doctor and administrator finished.

The Council are conscious, in a deep sense, of the loss of their colleague, whose constructive work in tuberculosis—not least the final portion of it—will be remembered.

IX. NURSE COMMISSIONERS

Mention has been made in previous Annual Reports of the work of the Nurse Commissioners in Northern Scotland, and these activities have continued during the year. Tuberculosis schemes in the more populous areas of the south grow yearly in efficiency, but it is forgotten how much they depend on easy accessibility for doctor, nurse and patient.

In the Highlands and islands, the nurse has to travel long distances to her patients. She has many things to do—midwifery, accidents and general nursing, and the preventive side of tuberculosis may be overlooked. Here lies the value of the Nurse Commissioners. They encourage and teach the hard-pressed District Nurse so that she may influence the family in the simple arts wherein true health lies.

Miss Ormiston and Miss Weir have met the usual share of climatic handicaps; snow, storms and impassable roads make their work adventurous without damping their spirits in the cause. To lessen the distance travelled by Miss Weir it has been arranged for the Isle of Lewis to be covered by Miss Cameron of the Queen's Institute.

The "refresher" course arranged for Highland nurses in the Southfield Sanatorium Colony, Edinburgh, has been another satisfactory feature of this scheme.

X. BURROW HILL COLONY

The Burrow Hill Colony, with its eighty-five boys coming from all parts of the country, has now won an accepted place in the estimation of tuberculosis workers. The opportunities there for a tuberculous boy must be greater than many healthy boys would have.

During the year we were pleased to welcome to the Colony a visitor from U.S.A., Dr. Kendall Emerson, Director of the National Tuberculosis Association. His comments are interesting. "On talking to the lads themselves, there could be no doubt that they appreciated the opportunities offered by residence at Burrow Hill. They undertake their work and study most seriously and all look forward with new hope to the day when they could put their training to practical and constructive use. The Colony's record of achievement in restoring its patients to lives of economic efficiency is one of notable success."

With such praise from a distinguished authority on tuberculosis, and the record of its former pupils' success, Burrow Hill may well feel proud of its position.

XI. VOLUNTARY CARE WORK

Nowadays so much tuberculosis work is carried out by the health authorities that it has been questioned whether Care Committees upon a voluntary basis are required any longer. Some Councils have even appointed almoners to look after the social problems of their tuberculous patients.

So long as care work in its fullest sense is carried on, the actual method matters little. But the Council of the Association know of cases where these activities have become severely restricted once the voluntary principle was abandoned. Merely providing an allowance of milk, etc., though clearly good, is a travesty of true care work—those creative efforts by which the whole existence of a tuberculous family can be salvaged from hopelessness.

But for work of this kind, funds are required. There seems no immediate hope that the Government will be able to increase its subventions to sufferers from tuberculosis. There remains private generosity, and the Council know from experience that voluntary Care Committees, vigorously undertaking the

Christmas Seal Sale, possess the means to care for the stricken family group in an adequate and constructive way.

While encouraging all sound measures for the relief of the tuberculous, the Association adheres to its rule of restricting the benefits of the Seal Sale to Care Committees that are predominantly voluntary. Only in this way can a local committee be truly representative of the charitable and commercial interests of the area. The fact that a committee is voluntary does not, of course, exclude the help of trained social workers, whose activities the Council desire to encourage.

The Council were pleased to welcome to affiliation the following Care Committees during the year:

Barnes Tuberculosis Care Committee.

British Honduras Association for Prevention of Tuberculosis.

Newcastle-under-Lyme Voluntary T.C.C.

Durham County T.C.C.

Cheltenham Voluntary T.C.C.

British Guiana Society for the Prevention and Treatment of Tuberculosis.

XII. SEAL SALE

Success again attended the Christmas Seal Sale, conducted under guidance from Headquarters by fifty affiliated societies throughout the country. This is an increase of eight as compared with 1937, itself a record year both as regards membership and financial returns. During the six years' existence of the annual Seal Sale in the United Kingdom, more than £50,000 has been raised, and local societies are to be congratulated on their unremitting effort and enthusiasm.

The regular increase in affiliated societies is evidence of a growing realisation that the Christmas Seal Sale affords the best means of procuring funds for the relief of families suffering from tuberculosis, and this work is regarded by the Council as of great importance in its campaign.

Her Majesty the Queen once more demonstrated her interest in the movement by ordering Seals.

The grateful thanks of the Association are due to the Chairman, Lady Titchfield, for the particular enthusiasm and tireless energy she has given to this side of the work.

XIII. HANDBOOK OF TUBERCULOSIS SCHEMES

A tenth edition of the Handbook was published in February 1939. The text has been extended in several directions: greater detail has been added, and the list of Residential Institutions made much more complete by including the names of medical superintendents. The Handbook is a complete directory of official tuberculosis work as carried on in this country. Many of its features do not exist elsewhere, and we wish that a copy of this annual publication could be on the desk of every medical practitioner and social worker.

XIV. BURMA

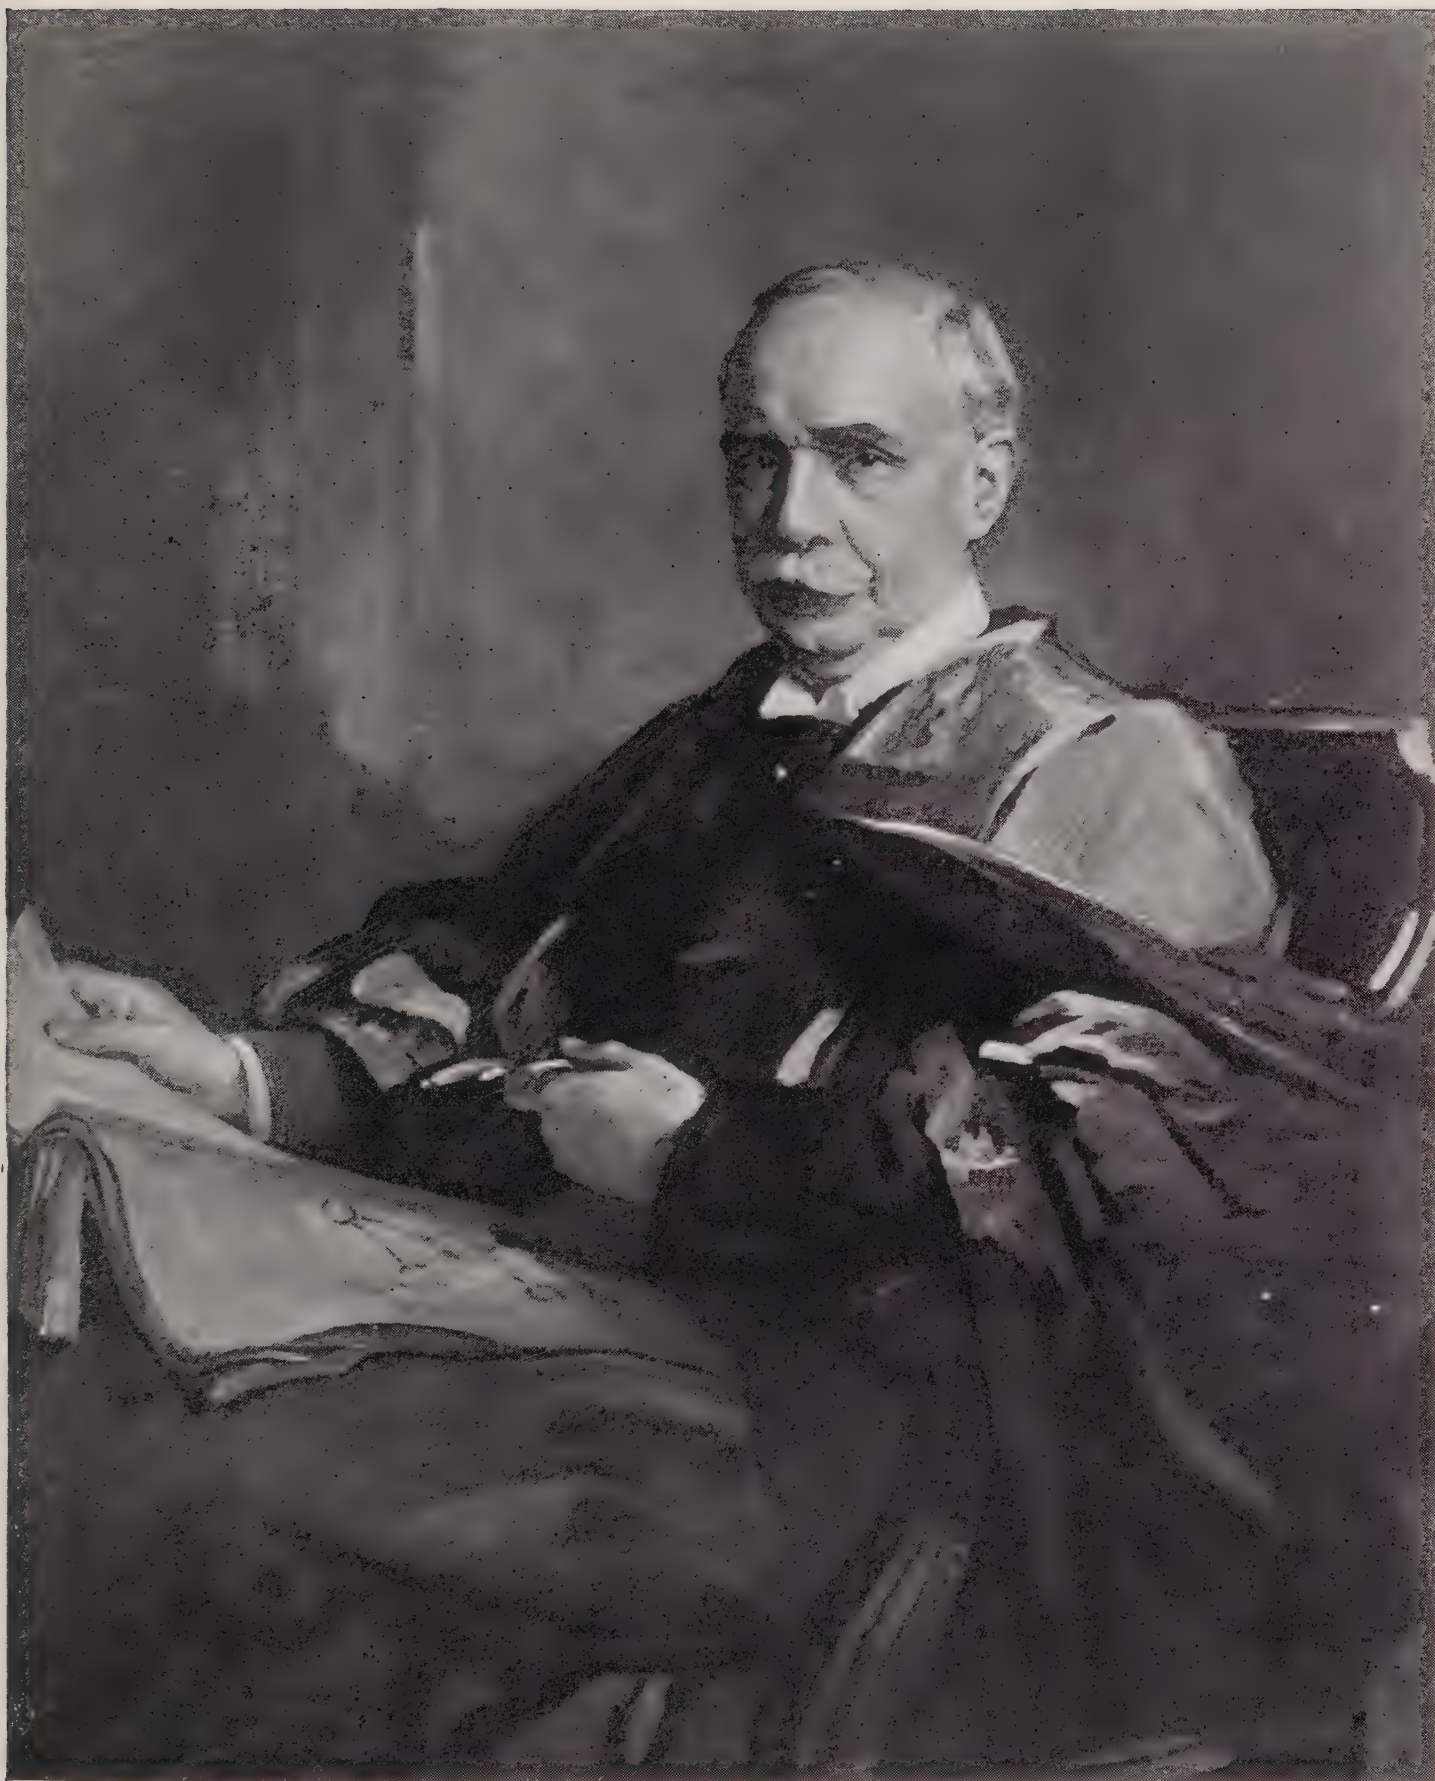

In the spring of the year the Association was in communication with the Burma Tuberculosis and Leprosy Relief Association, newly formed to consider schemes for eradicating these diseases in the Dominion. His Excellency the Governor launched an appeal for funds to tackle a problem which is understood to be vast and undefined. The Council were invited to suggest the name of an authority who would go out to Burma and make a survey of the whole incidence of tuberculosis, as was done by Dr. Bardswell in Cyprus, and upon the result of whose investigations a constructive programme could be based.

The Council are pleased to announce that one of their number, Professor Lyle Cummins, formerly David Davies Professor of Tuberculosis in the University of Wales, consented to be responsible for this interesting and important task, and sailed for Burma in October. No more eminent exponent of scientific research in tuberculosis could have been selected, and his report will be awaited with interest, as preliminary communications suggest that enlightenment is coming by use of the tuberculin test.

As in the case of the Cyprus investigations, these surveys are of primary interest to the area concerned, but the lesson they give on the epidemiology of tuberculosis can be widely applied, not only to tropical lands but also to temperate countries, and thus add to our sum of scientific knowledge.

XV. FINANCE

A voluntary association dependent for its income upon past and present generosity of the public, and receiving no grants

THE LATE SIR ROBERT PHILIP

Facing page 8

from official sources, has to weigh carefully its financial policy if its work is to be maintained and extended. The commitments already undertaken will absorb a portion of the Association's resources for some years to come. At the same time there is much new work to be done by a voluntary body such as ours, which is free from official restraints and in touch with the tuberculosis movement throughout this country and abroad.

With these considerations in mind, the Council have tried to conserve investments, and, with due regard for economy, not to restrict any part of its work.

XVI. MEMBERSHIP OF COUNCIL

By the death of Dr. L. S. T. Burrell, the Council lost one of their most faithful members, and many tuberculous patients a sagacious physician and friend. Dr. Burrell, who has passed from us, is remembered for his clinical judgment and his fearless, yet always courteous, pronouncements at the Association's Conferences.

We have also to record the loss during the year of Dr. H. W. McConnell, who was a member of the Council for some years and was especially interested in Kelling Sanatorium, Norfolk; and of Dr. Jane Walker, a pioneer in the treatment of tuberculosis, a forceful and lovable personality, and one who always put the tuberculous patient before the disease. Dr. Walker was a member of Council between 1908 and 1911.

The following names of members were drawn in the annual ballot under Article 12, and their re-election is cordially recommended:

Miss BROADBENT
Professor LYLE CUMMINS
Sir HENRY GAUVAIN
Lady QUILTER
Lord ROWALLAN
Mrs. H. J. TENNANT

XVII. SECRETARY-GENERAL

After nearly two years' service as Secretary-General, Colonel E. D. Caddell retired with the good wishes of the Council, and Dr. Harley Williams was appointed Secretary-General as from the beginning of the year.

XVIII. STAFF

The Council wish to express their appreciation to the members of the staff, both at Headquarters and at the Burrow Hill Colony, for their devoted work during the year.

By order of the Council,

IVY TITCHFIELD,
Chairman.

HARLEY WILLIAMS,
Secretary-General.

AUDITORS' REPORT

WE REPORT that we have obtained all the information and explanations we have required, but that we have not seen the Title Deeds of the Land and Property at Burrow Hill Sanatorium Colony. We have examined the above Balance Sheet with the Books and Vouchers relating thereto, and in our opinion it is properly drawn up so as to exhibit a true and correct view of the state of the affairs of the Association, according to the best of our information and the explanations given to us, and as shown by the Books of the Association.

DATED this 20th day of March, 1939.

LORD, FOSTER & CO.,
Chartered Accountants, 37 Walbrook, E.C.4.

APPENDIX I

BURROW HILL SANATORIUM COLONY

(a) Report of Medical Superintendent, 1938

This is the tenth report which has been submitted since the scheme for treatment and education of adolescents came into operation at Burrow Hill. As in recent years, beds have been fully occupied during 1938 and, indeed, there has always been a small waiting list. This is in striking contrast to the difficulty experienced in filling the beds during our earlier years. The demand is now greater than the supply and suggests that the day may come when more accommodation will be a necessity. Meanwhile, the full use that is being made of our beds is significant. It shows that tuberculosis workers throughout the country realise that the special facilities at Burrow Hill serve a special need.

As might be expected from this record of fully occupied beds, the year 1938 has been a year of useful work. This is described in detail in the reports of the Schoolmaster and Horticultural Instructor, and the work of the year is further illustrated by reference to the examinations results incorporated in the school and garden reports.

As indicated in the school report, the crisis of the autumn resulted in a period of considerable stress and unrest. The unsettling influence of these weeks was profound and effects of this were still being felt throughout October and November. It says much for the stability of our routine and the soundness of the scheme as a whole that it survived the shock of the autumn and that the continuity of our work was not more seriously interrupted and was fully restored to normal by the end of the year.

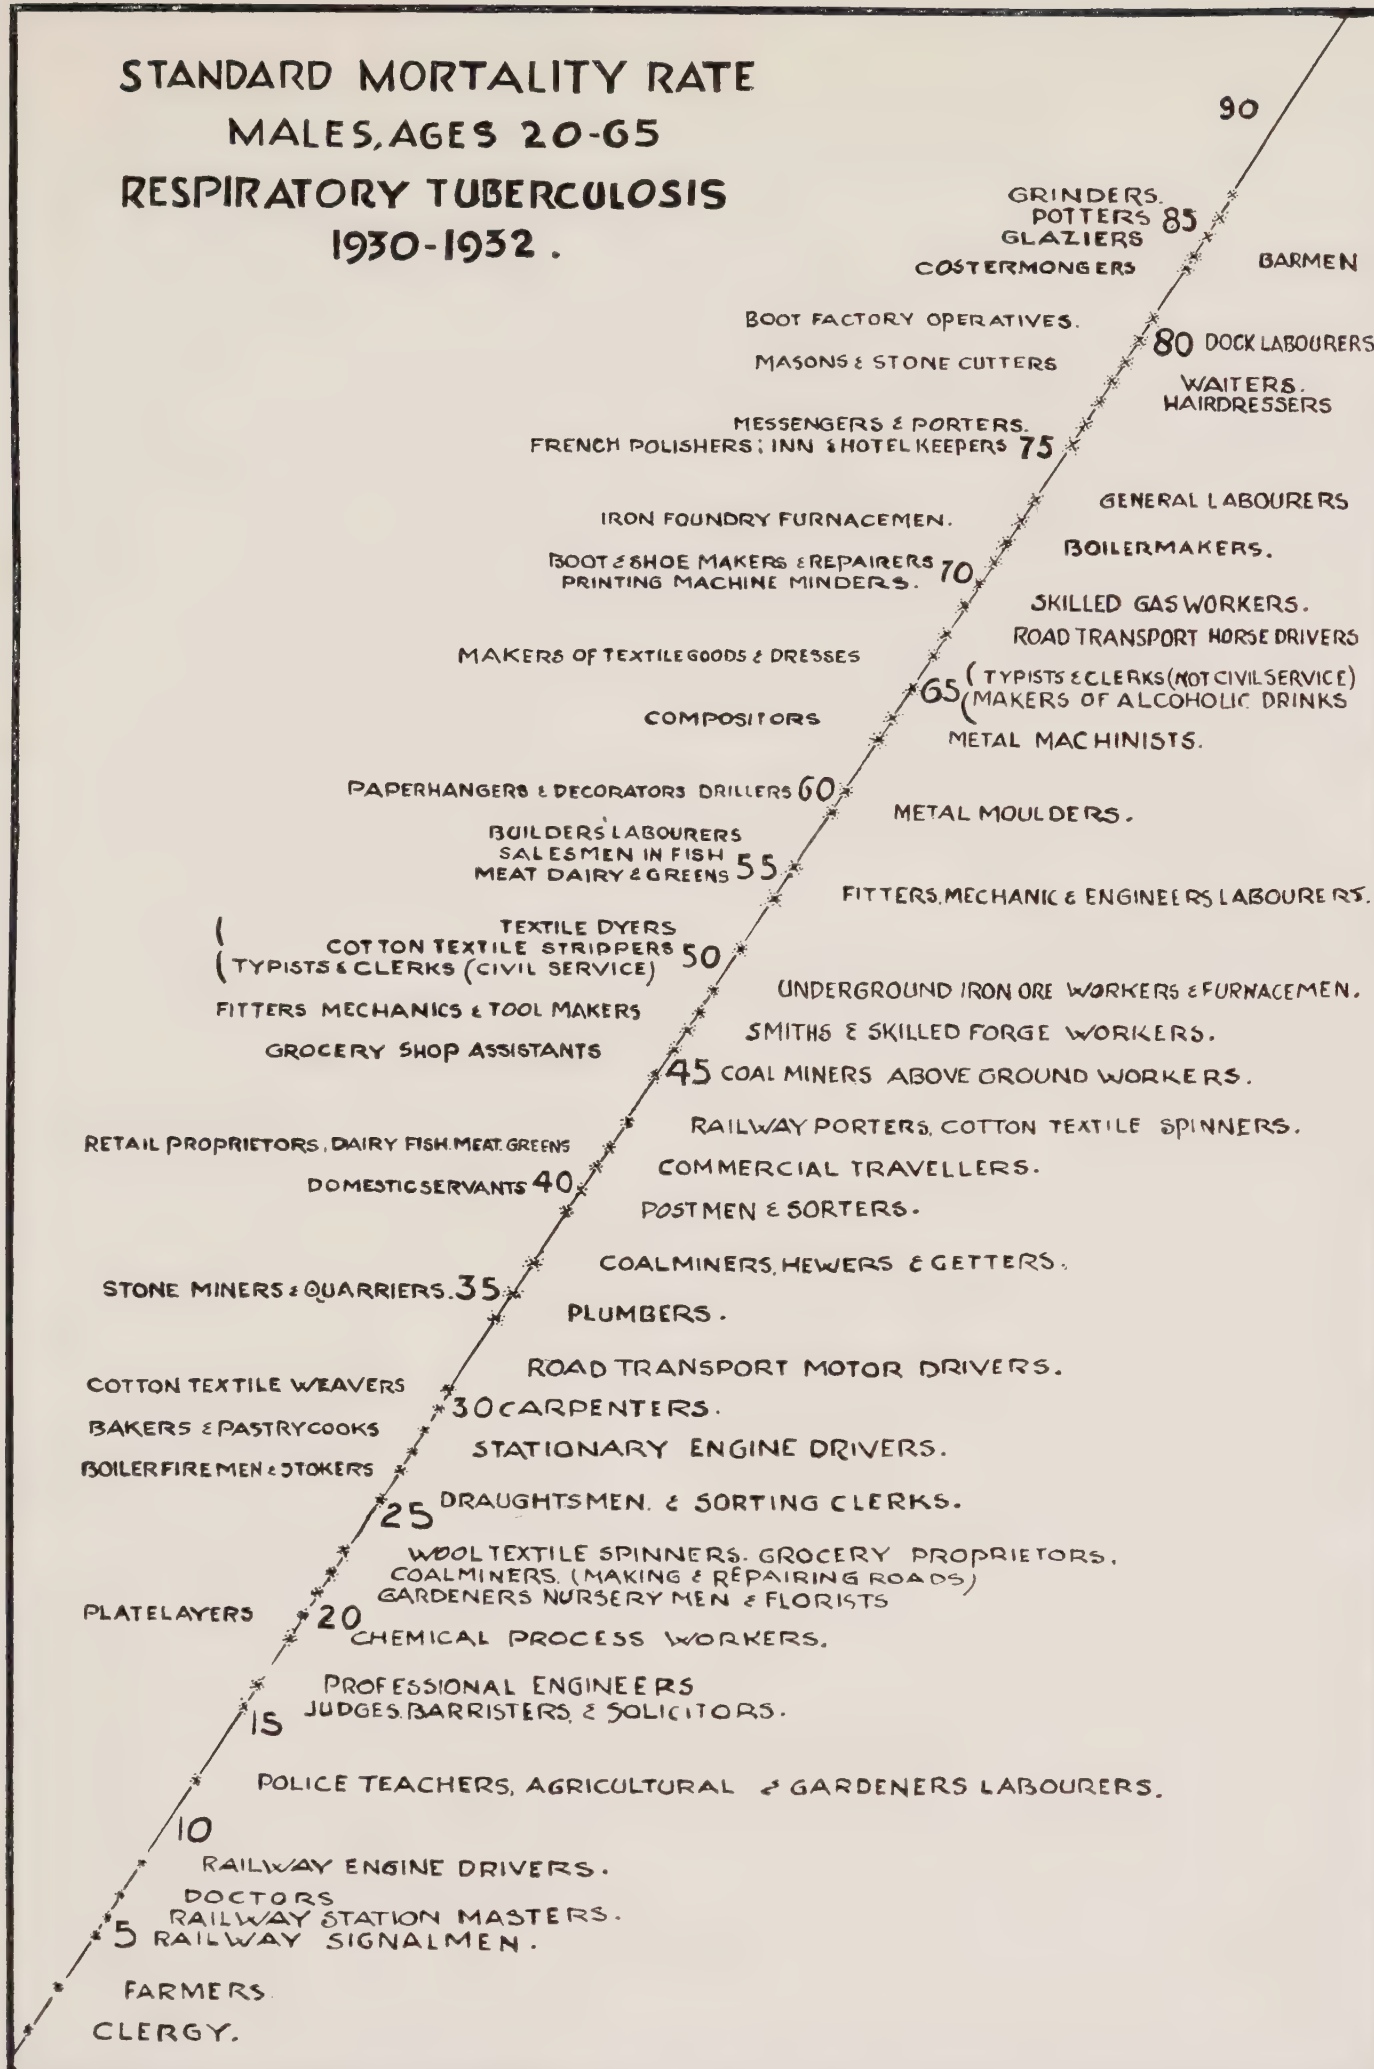

Our success in training would be valueless if we were not also successful in our primary aims—the restoration of health. As is inevitable in the adolescent age period many patients relapse and must be transferred to hospital or sanatorium. But a reasonable number stay the course and, in their case, the value of long-period treatment is fully justified. The two years at the Colony, following upon previous treatment in a sanatorium or hospital, ensures that length and continuity of treatment which are necessary for the adolescent tuberculous subject.

Needless to say, similar prolonged and continued treatment is desirable for the adult also, but for the adult it is seldom practicable. In the case of the adolescent it is practicable and Burrow Hill provides the opportunity.

Without accompanying education and training, this prolonged treatment would be worse than useless, because in these formative years the resulting idleness and lack of aim would lead to a permanent loss of initiative. The combined treatment and education scheme of the Colony allows of restoration of health without loss of morale. That these are no mere transitory results will be shown by a glance at our figures for employment. The number of trained patients who are in employment is gratifyingly high. It is also a matter for congratulation that this figure is much higher now than it was in our earlier years.

In thus restoring to wage-earning capacity youths who have been disabled

STANDARD MORTALITY RATE MALES, AGES 20-65 RESPIRATORY TUBERCULOSIS 1930-1932.

This Chart is a comparative grading of the death rate from Respiratory Tuberculosis amongst males in 89 occupations in England and Wales, compiled from the Registrar-General's Decennial Supplement for England and Wales, 1931.

by disease and handicapped by onset of disease during the years of apprenticeship the Colony is doing a real service to the community.

During the decade that has elapsed since the inception of the scheme in 1929, this service is becoming more generally recognised. Medical men now joining the Tuberculosis Service find the Colony an established unit in the institutional treatment of tuberculosis. As time goes on, the work of the Colony will steadily become more widely known and the demands upon its accommodation will increase. As one enthusiastic Tuberculosis Officer expressed it, our slogan may have to be "A Bigger and Better Burrow Hill."

EXTRACTS FROM LETTERS OF APPRECIATION

1. "Will you please again accept our warmest thanks for the interest and care you have taken in J——'s case. Will you please also convey our thanks to your staff, who have always treated him well." (J. F. H.)

2. "I wish to state how glad I am to have been a patient at Burrow Hill. I am positive that my two years there have been the foundation of my continued fitness." (D. W.)

3. "We have so much to thank you for, and for J——'s wonderful treatment during his stay under your care, we are sincerely grateful." (J. L.)

4. "Yesterday I was given a rise and am now looking forward to the next one. For all this I have the Colony to thank; for my training and for giving me back my health. . . . Wishing you the best in your campaign against illness and ignorance." (R. B.)

5. "I feel that I should write to you expressing my thanks to you and everyone at Burrow Hill, because my presence here (in the Army) is entirely due to you. You will remember a poorly-looking boy, whose name was J—— who entered the Colony and who was made fit enough to join the Army." (A. J.)

6. "I am still working in the trade you taught me, and I may add that the training I received while at the Colony helped me considerably in obtaining the position I now hold." (L. R.)

7. "I am writing to thank you and the rest of the staff for all you did for me while I was at the Colony. . . . I am now on the permanent staff and am very grateful for all that Burrow Hill and its staff did for me to help me get so far." (J. F. H.)

8. "I should like you to know that I am getting on very well with my work and for this I am very grateful for the time I spent at the Colony. It is now over five years that I have been home and I am now married, but I still look back to the Colony days and wish that I had been a little more contented than I was. . . . I was helped by your understanding of me and I cannot help repeating once more how very grateful I am. In these times a regular job such as the training at the Colony afforded me is something to be very grateful for." (T. T.)

Report on the School Year, 1938

With the exception of the closing of Burrow Hill in September, due to the political crisis, the school year ran its ordinary course. The number of boys in the Clerical side remained at a maximum throughout the year, but the School-Gardeners class was below strength, and, as in previous years, their standard of education was so low that progress was very moderate. The work done by the Clericals was very satisfactory indeed, and the ability which many of them showed in 1937, and to which I made reference in the 1937 Report, was fully tested, with extremely pleasing results.

The introduction of the London Chamber of Commerce examinations has fully justified itself. This was the first full year in which the examinations were held at quarterly intervals, and the benefit to the students was clearly demonstrated. They were able to advance more quickly or to repair their failures in shorter time. The detailed results of the examinations are set out elsewhere. It is very pleasing to be able to report that the Bronze Medal awarded by the Royal Society of Arts for Intermediate Arithmetic, July 1938, was won by one of our students—J. H. Bryant (Surrey). It had been awarded previously, to F. W. H. Currey (Essex), July 1937, and to W. A. Potter (Essex), Easter 1935.

As these successes were gained in open competition with students from all parts of Great Britain, they reflected great credit on the industry and ability of the three individuals concerned. All four students entered for the Advanced papers were successful.

Borrowing from the Surrey County Library continued throughout the whole year, and the help we received from various text-books was invaluable. Many of the books went to the gardeners who were preparing for the examinations of the Royal Horticultural Society.

The school magazine, *The Burrovian*, again appeared at Easter, Midsummer and Christmas, with about 200 copies per issue. About half of these were sold in the Colony and the remainder were sent out to various people who are interested in the Colony and its work. Fewer articles were received from old patients—who tend, naturally, to lose touch with the Colony after several months—but a greater number was obtained from the boys in residence.

The evacuation of the patients from Burrow Hill during the last week of September had a very upsetting influence on the last quarter of the school year. The tension to be seen outside was noticeable, on a much smaller scale, in the Colony, and there was much lost time through the breaking of the routine, absence of students and the widespread feeling of unrest.

On December 30th, Mr. Mapledoram, who had charge of the Commercial side of the school work, resigned to take up another appointment. He had been a member of the staff since August 1931, and during his time here he had had many successes with his pupils.

(Signed) L. J. ALLEN,
Head Schoolmaster.

Report on the training of boys in horticulture at Burrow Hill Colony

It is very satisfactory to note that, during the year 1938, the number of boys receiving horticultural instruction has been about the same as in previous years. Of the new arrivals to the Colony it is always to be noticed that many are of poor stature and physique, and these factors call for much care in the initial weeks of training in order to prepare them for the usual two years to be spent here.

Most boys appear to take very kindly to this type of work and it is a great pleasure to observe the vast improvement shown, both mentally and physically.

Trainees work in the gardens either two or five hours, according to their medical condition, and, of this time, all spend one hour daily in the lecture room, where they are given lectures and demonstrations in all branches of horticulture. The duration of these lectures is increased when inclement weather renders it undesirable to work out of doors.

Twice yearly we hold our own local examinations, for which all the boys enter and, by this method, it is easy for the instructors to estimate the progress and capacity of each trainee. Some of the more advanced pupils are encouraged to enter for the examinations held by the Royal Horticultural Society which are open to candidates from all England, Scotland and Wales. This entails extra work for both the trainee and his instructor, much of which is done in their leisure hours. But the results fully justify this, as will be seen from the following table of yearly examinations results:

Sessions	No. of Entries	No. Passed
1933/4	4	4
1934/5	5	5
1935/6	—	—
1936/7	8	4
1937/8	6	5
1938/9	5	Results not yet known

A number of our trained patients have been successful in obtaining good situations in various private gardens and nurseries, public parks and in institutions. It is always a great stimulus to the boys in training to know that a number of ex-patients have been given employment in the London County Council's Parks Department and, from the reports that reach us from time to time, it appears that these boys are doing splendid work. It is to be hoped that, in the future, an even greater number may be given opportunities for suitable employment.

(Signed) F. E. MILLER,
Head Horticultural Instructor.

FRESH AIR AND SUNSHINE

**OUR GREATEST
ALLIES IN
PREVENTING
DISEASE**

Fresh Air and Sunshine

Our Greatest Allies in Preventing Disease

AIR—with the oxygen it contains—is essential for Life.

For a Healthy Life, both in children and adults, the air must be fresh, that is, must be continually renewed from outside. Night air, which old-fashioned people think dangerous, is as good as air in the day-time.

This is especially necessary to prevent Tuberculosis. To avoid this disease in members of your family, they should live constantly in an atmosphere of *moving air*. Not only the bedroom, but shops and offices, churches and schools, must be well ventilated.

The air that we breathe out from our lungs contains substances that must be allowed to escape from the room; it may also contain the germs of disease. Impure air breathed over and over again is the cause of much ill health, such as headache, loss of appetite, anaemia, and tiredness. Such lack of fresh air prepares the way for Tuberculosis and other diseases.

FRESH AIR AND SUNSHINE

It is necessary that in every room or office there should be *two openings*—one for the air to come in, and another for it to find its way out. The top of an open window and the chimney flue are good examples. It is a good rule always to make sure that the window is left open when one goes out of a room.

Fresh air and Sunshine help to *destroy* the germs of Tuberculosis and other diseases. All rooms, especially bedrooms, should be flooded with fresh air; heavy curtains and blinds are a great hindrance to health. Crowded halls and cinemas, if not well ventilated, may be breeding grounds of the germs which cause common colds and influenza, to say nothing of a serious disease like Tuberculosis.

The mere squirting of disinfectant solutions into the air is absolutely useless from the Health point of view. It may mask an unpleasant odour which should not be there.

Remember that the air in a room can never be pure if the room is dirty. Gas lights and oil lamps consume air and emit certain impurities in the same way as a human being from the lungs.

If you value their health, it is your duty to see that your *children* live all the time *in fresh air*. It is not enough that they should breathe pure air a few hours occasionally when playing games. They need it every day and *twenty-four hours in the day*.

The air and sunshine outside every man's window form his best protections from disease. They are free. *Use them generously.*

The Red Cross with the double arms
is now the international symbol in
the crusade against Tuberculosis.
It was taken from the shield of
Godefroy de Bouillion, who captured
Jerusalem from the Turks in
1099. To conquer
Tuberculosis, we must
capture the spirit
of the great
Crusaders.

Price 2s. 6d. per one hundred. 10s. per five hundred. £1 per one thousand.

Number THREE

MILK AND TUBERCULOSIS

National Association for the Prevention of Tuberculosis

MILK AND TUBERCULOSIS

TUBERCULOSIS is common in childhood. It is due to a germ or microbe known as the **tubercle bacillus**. The disease may attack bone or joint with crippling effects, or may occur in the glands or abdomen. It may prove fatal, or it may be the beginning of disease which may recur later in life.

Cattle are very liable to tuberculosis, and the **tubercle bacillus** is frequently present in the milk of cows suffering from the disease.

Such contaminated milk is recognized as being one of the sources of tuberculous infection, especially in children.

Parents and others should make sure that milk given to children is guaranteed free from this infection, or themselves take steps to render it so (as indicated below).

The Health Authorities have graded the milk supply of the country and the consumer can, if he wishes, obtain milk which is clean, pure, and free from tuberculous infection.

The **Grades of Milk** are as follows :—

1. **Tuberculin Tested.**
2. **Accredited.**
3. **Pasteurised.**

These designations are explained shortly.

1. **Tuberculin Tested** milk is the highest grade and is produced from cows which the Health Authorities have certified to be free from tuberculosis. The methods of producing this milk necessitate great care as regards cleanliness. It should not contain contamination of any kind such as is usually found in the cowshed.

This grade of milk in its natural state may be safely given to children.

You can help the supply of such milk by asking for it.

2. **Accredited** milk is produced under clean conditions but without guarantee of freedom from tuberculous infection (though the cows from which the milk is obtained are subjected to regular veterinary examination).

Accredited milk, or milk as ordinarily supplied, can be rendered safe as regards tuberculous infection by simple boiling.

3. **Pasteurised** milk has been heated for 30 minutes at a temperature between 145° to 150° Fahrenheit and at once cooled. This procedure destroys tubercle bacilli or other harmful organisms.

Every parent should secure, if possible, one of the above grades of bottled milk. If there be any doubt as to the quality of the milk it is best to treat whatever milk you buy by pasteurising, or by boiling for a few minutes.

Boiled and pasteurised milk may advantageously be supplemented by one or two teaspoonfuls of orange-juice every day, in view of the possible loss of vitamins during the heating process.

CARE OF MILK IN YOUR HOME

Milk should always be kept in the cleanest and coolest place in the house.

The consumer should insist that milk is delivered in capped bottles.

The cap should not be removed from the bottle until the milk is to be poured out, and the cap should be replaced immediately.

Any milk left over should not be put back in the bottle.

All vessels used in the handling of milk should be scrupulously clean and should be scalded before and after use. They should be allowed to dry and should not be wiped with a cloth.

All open milk vessels should be protected by a clean fly- and dust-proof cover.

Clean milk keeps fresh much longer than dirty milk.

The Red Cross with the double arms
is now the international symbol in
the crusade against Tuberculosis.
It was taken from the shield of
Godefroy de Bouillion, who
captured Jerusalem from the
Turks in 1099. To conquer
Tuberculosis, we must
renew the spirit
of the great
Crusaders.

Price, 2s. 6d. per hundred. 10s. per five hundred. £1. 0. 0 per thousand.

The Association took part in the following Health Exhibitions arranged by the Central Council for Health Education:

Blackburn Health Exhibition
Cambridge Health Exhibition
Shoreditch Health Exhibition

(b) LECTURES

The spoken word still remains the best method of health teaching, if combined with suitable films either of the sound or silent variety. The Association arranges for specialist doctors to give lectures of this kind in all parts of the country. Where the local authority or other body is prepared to meet a portion of the cost this can be done quite easily and cheaply.

FILM DEMONSTRATIONS

The Association possesses a travelling cinema outfit for showing both sound and silent films. This can be put at the disposal of local societies prepared to meet a part of the cost. The Association's operator will erect the screen and apparatus and project the films and slides, and black curtains are carried to cover the windows of all but the largest halls.

Lecture notes and all information will be supplied on application.

Please write suggesting dates to the Secretary-General, N.A.P.T., Tavistock House North, Tavistock Square, London, W.C.1.

HIRE OF FILMS

Films described in the list below have proved their value as media of health education. They can be hired at short notice from the Head Office of the Association.

HEALTH EXHIBITIONS

The Association has two travelling health exhibitions, and is prepared to send them out with a demonstrator, who, for larger centres, sets up the exhibits and gives talks and information during the week. For smaller places there is an auxiliary health exhibition, which can be erected by an amateur in an hour or two. Both these exhibition services are at the disposal of those arranging demonstrations and health exhibitions.

All educational work in Wales is carried out by the King Edward VII Welsh National Memorial Association. The Headquarters of the Association are at Cathays Park, Cardiff.

HIRE OF CINEMATOGRAPH FILMS AND SLIDES

A full list of lantern slides and description of cinematograph films available for hire from the Association will be sent on application to the Secretary-General.

The Association's cinematograph films and slides cover the subject of the Prevention of Tuberculosis in its widest sense. There is material to illustrate lectures to medical students and nurses, as well as more homely talks to mothers and children.

The Association is anxious that these should be of the greatest possible value to anyone who is preparing a lecture on a special aspect of the subject.

The Secretary-General will, on request, offer suggestions as to the most suitable slides and films for any particular purpose, and will send type-written notes to form the basis of a lecture.

Cinematograph projectors taking films of standard and 16 mm. size can usually be obtained locally at a moderate charge. The current may be obtained from any electricity supply.

The films are non-inflammable, and may be shown without special licence or insurance in any hall.

Particulars of the cinematograph films which the Association lends are given in Appendix II (c). These are available in the usual standard size (35 mm.) and also in the sub-standard size (16 mm.). The list of films is being extended.

(c) Price List of Publications, Films, and Lantern Slides

All the Association's films, in both standard and 16 mm. sizes, are made in non-inflammable material (aceto-cellulose), and may be shown in any hall without licence under the Cinematograph Acts.

CINEMATOGRAPH FILMS AVAILABLE FOR HIRE

The following charges and running times refer to all films:

Charges—day			week		Average time one reel	
16 mm. silent	5/-	20/-	16 mm. silent	14 min.		
16 mm. sound	7/6	30/-	16 mm. sound	11 min.		
35 mm.	10/-	40/-	35 mm.	11 min.		

SOUND FILMS

	Size	Number of Reels
<i>Stand Up and . . . Breathe!</i>	35 mm.	1
An attractive film taken in open-air scenes	16 mm.	1
<i>The Conquest of Tuberculosis</i>		
An up-to-date sound film describing the National Tuberculosis Scheme in all its aspects; dispensary, hospital, sanatorium, village settlement, veterinary service. Illustrated by pleasing scenes and music.	35 mm.	2
Good general film suitable for all types of audiences	16 mm.	2
<i>Contacts</i>		
Produced in the University of Minnesota, U.S.A., by the Hennepin County Tuberculosis Association. An attractive film showing the detection of Tuberculosis in a family by the use of the Mantoux test	16 mm.	2
<i>Makers of Men</i>		
The Burrow Hill (Surrey) Training Colony for boys aged 13-19: their cure and training amid delightful surroundings	16 mm.	1
<i>Healing by Sealing</i>		
A new film emphasising the importance of the Christmas Seal Sale in all aspects of care and after-care work	16 mm.	1
<i>The Nurse's Part in Tuberculosis</i>		
How the nurse helps to prevent tuberculosis, and what she is to teach her patients; covers all points in the management of a tuberculous family	16 mm.	1

SILENT FILMS OF GENERAL INTEREST

<i>Production of Tuberculin Tested Milk</i>		
Complete description of milking, bottling and distributing from tuberculin-tested cows	16 mm.	1

	Size	Number of Reels
<i>A Stitch in Time</i>		
Descriptive of tuberculosis in a family: an adult case of phthisis infects a child—her dispensary and institutional treatment and final cure	35 mm.	2
	16 mm.	2
<i>Air and Sun</i>		
Taken in Switzerland, 4,000 ft. above sea-level. Children in open-air schools, and snowballing, without clothes	35 mm.	I
	16 mm.	I
<i>Consequences</i>		
How the young mother discovered tuberculosis and realised her personal problem: a plea for prompt diagnosis and treatment	35 mm.	I
	16 mm.	I
<i>Delay is Dangerous</i>		
The family man is faced with the discovery of his tuberculous condition. How he meets the difficulties and emerges triumphant	35 mm.	I
	16 mm.	I
<i>Makers of Men</i>		
The Burrow Hill (Surrey) Training Colony for boys aged 13-19: their cure and training amid delightful surroundings	16 mm.	2
<i>Stand up and . . . Breathe!</i>		
An attractive film taken in open-air scenes	16 mm.	I
<i>Growing Up</i>		
A pleasant film describing some of the ways of protecting children against tuberculosis	16 mm.	I
<i>The Wind and the Earth</i>		
A film illustrating tuberculosis work in a rural area	16 mm.	I
<i>Looking Backward and Forward</i>		
An historical retrospect contrasting our knowledge of Tuberculosis thirty years ago with the improvements of to-day, with extracts from the Association's old films through the period. An attractive record of a change of thought	16 mm.	I
SPECIAL SILENT FILMS (more suitable for exhibition to doctors, nurses, health visitors, teachers and other specialists)		
<i>How Tuberculosis is Caused</i>		
The infection and pathology of tuberculosis and the natural resistance of the body: respiration, circulation, etc. (with descriptions)	35 mm.	I
	16 mm.	I

	Size	Number of Reels
<i>The Nurse's Part in Tuberculosis</i> How the nurse helps to prevent tuberculosis, and what she is to teach her patients; covers all points in the management of a tuberculous family ..	16 mm.	1
<i>A Day in an Open-air School</i> Describes preventive measures for tuberculous "contacts"; the influence of open-air, nutrition and sunlight	16 mm.	1

HIRE OF LANTERN SLIDES

Per 30 slides per Lecture, 3/- plus carriage.

Any person wishing to hire a collection of slides may select from the list, which may be obtained on application. Slides available include the following groups:

1. Statistics.
2. Physiology and Pathology.
3. Tuberculosis of the Bones and Joints (including treatment at various institutions, tuberculosis and milk, etc.)
4. Sanatorium and Colony Life (illustrated by activities at several institutions).
5. "The Need for Fresh Air" (useful for simple popular instruction).
6. Open Air Schools (illustrated by schools in various parts of the country).
7. Historical (pioneers of Medicine and Public Health throughout the ages).

<i>Office</i>	—	—	—	—	—	24 CHURCH STREET, KINGSTON, JAMAICA, B.W.I.

APPENDIX IV

CONDITIONS FOR AFFILIATION OF OTHER BODIES TO THE NATIONAL ASSOCIATION

1. The Council of the National Association desire to extend widely among suitably constituted bodies dealing with tuberculosis the privilege of affiliation, both in the interests of these bodies themselves, and in order to emphasise the national character of anti-tuberculosis work.

2. Any Voluntary Society or Committee whose principal aim is the eradication of tuberculosis, and whose practical work to that end is approved by the Council of the National Association, shall be eligible for affiliation.

3. This definition includes voluntary bodies which are concerned in the treatment of individual cases and the protection of their families ; such as Tuberculosis Dispensaries, Care Committees, Sanatoria, Hospitals, Colonies, Settlements, Open-air Schools, Workshops and Classes for the training and employment of tuberculous persons, agencies for furthering the eradication of tuberculosis among cattle and the sale of milk from tuberculin-tested herds; provided that in each case they are approved by the Council.

4. The privileges of affiliation are as follows:

(1) Affiliated societies have the right to use the double red cross sign, and are requested to print it on reports, notepaper, etc. A block of the cross is supplied free. It is also requested that societies shall add after their names on reports, paper, etc., the words "affiliated to the National Association for the Prevention of Tuberculosis."

(2) Literature is supplied at cost price.

(3) Individual cases requiring assistance which, owing to any special circumstances, cannot be dealt with adequately by the health authorities or other local agencies, and which are recommended by an affiliated society, receive the special consideration of the Association's Grants Committee.

(4) Affiliated societies have the right to send one representative each to the Association's Annual Conference without payment of a fee.

(5) The Council of the National Association are always ready to give advice or information.

There is no fee for affiliation.

5. Affiliation may, with the further sanction of the Council, carry with it the right to participate in the Christmas Seal Sale for Tuberculosis.

6. The privilege of affiliation shall be continued from year to year, and at any time the Council of the National Association shall have the right to withdraw the privilege, if the Constitution or Objects of the affiliated society are changed, or if, in the opinion of the Council, the work of the affiliated body does not reach the standard considered by the Council to be adequate. The affiliated society shall send a copy of its Annual Report and Balance Sheet to the Association.

7. Before granting affiliation, the Council shall consider the Constitution and Objects of the body seeking the privilege, and its latest Report, audited Balance Sheet, and other evidence of work accomplished.

APPENDIX V

MODEL CONSTITUTION FOR A COUNTY OR COUNTY BOROUGH VOLUNTARY TUBERCULOSIS CARE ASSOCIATION

1. This shall be styled the — Voluntary County Tuberculosis Care Association, affiliated to the National Association for the Prevention of Tuberculosis, and shall consist of representatives from the Tuberculosis Care Committees in the County and other interested persons.

2. Its object shall be the continuous care of patients suffering from Tuberculosis, and their families. Its activities may include the following:—

(a) To ensure that every person suffering from Tuberculosis in the county area is under the supervision of the local Tuberculosis Dispensary.

(b) To provide, where necessary and possible, improved housing accommodation and means of livelihood for tuberculous persons and their families.

(c) To provide means of occupation, open-air shelters, bedding, clothing, books, and other means of improving the patients' mental and physical environment.

(d) To provide, in Holiday and Convalescent Homes, accommodation for children and others in contact with cases of tuberculosis.

(e) To provide means whereby patients in sanatoria can be visited by their relatives.

(f) To provide extra nourishment for patients suffering from tuberculosis, and their families.

(g) To set up workshops and handicraft classes for tuberculous persons.

(h) To form fresh Voluntary Care Committees or area sub-Committees where necessary to carry out the above objects in various parts of the County.

In carrying out the above activities, full contact shall be made with the appropriate official and voluntary agencies.

The Association shall exist to promote the above activities either by assistance to existing Care Committees, the promotion of new Care Committees, or by direct administrative action.

3. The Association shall consist of — representatives from each Care Committee in the area.

4. The Office Bearers shall consist of a Chairman, Vice-Chairman, Secretary, Treasurer, and — members. In addition, — members of the County Council of — may be co-opted.

5. The County Medical Officer of Health and County Tuberculosis Officers shall be members *ex officio*.

6. The Committee shall apply for recognition to the County Council of — in order to become eligible to receive grants available for the care of persons suffering from tuberculosis.

7. An Executive Committee of the Association may be formed, consisting of the office-bearers, the Tuberculosis Officers and — members.

8. Any three members of the Committee resident in a particular part of the County may be formed into an Area Sub-Committee for that area, with power to co-opt two persons to their number, and such powers of action as the County Committee shall see fit.

9. The Association shall meet four times yearly in the months of January, May, July and November.

10. If, on the formation of the County Tuberculosis Care Association, there exist other local Tuberculosis Care Committees or bodies undertaking Tuberculosis Care Work for a part of the County less than the whole, but not affiliated to the National Association for the Prevention of Tuberculosis, the County Association shall agree to give them representation on its membership, provided the constitution and objects of such local Associations are approved by the National Association for the Prevention of Tuberculosis.

Where such existing local Care Committees or other bodies undertaking Tuberculosis Care Work are affiliated to the National Association for the Prevention of Tuberculosis, they shall be admitted to membership of the County Association.

11. New bodies proposing to undertake Tuberculosis Care Work in the County may be given representation on the County Association provided that their Constitution and objects are approved by the County Association and by the National Association for the Prevention of Tuberculosis.

12. The County Association shall publish an Annual Report and Balance Sheet.

13. The Committee shall apply annually to the National Association for the Prevention of Tuberculosis for participation in the benefits of the Seal Sale.

14. All matters of doubt in the working of the County Care Association shall be referred to the Council of the National Association for the Prevention of Tuberculosis.
